

# New Repose<sup>®</sup> is clinically effective, cost effective, comfortable, durable and requires no maintenance.

Repose provides effective pressure redistribution for all people at risk of developing pressure ulcers, including those assessed as very high risk. Repose is also appropriate for people with pressure related tissue damage - clinical supervision is advised where tissue damage is severe. <sup>[1,2]</sup>

## Clinically effective – comparable efficacy to significantly more expensive powered mattresses.

Authors reported in one RCT involving 80 elderly patients with fractured neck of femur no statistically significant difference was found between the Repose and Nimbus\* <sup>(5)</sup>

## Cost effective – up to 50 more patients benefit from Repose than conventional powered mattresses.

*“There has been a definite shift away from the use of dynamic systems. Due to the increased availability of Repose mattresses, patients are being ‘upgraded’ more quickly. ... Although cost impact has not been looked at, the Trust was spending in excess of £300,000 per year on dynamic systems. The budget for all pressure relieving equipment is now £62,000 per annum” <sup>(2)</sup>*

## Durable – average life span equivalent to more expensive dynamic systems

Two large community equipment loan stores report Repose mattress average life cycle to be in excess of 20 months. The new Refresh cover provides the opportunity to further extend the life of a Repose and maintain pristine condition <sup>(3)</sup>

## Portable – lightweight, dual purpose pump packaging – easy to store and transport.

Popular with NHS Supply Chain logistics, Community Equipment Services loan stores and Nurses

## Easy to use – clear instructions, quick ‘fool proof’ inflation, easy to set up ready for use.

Patented ‘smart valve’ technology inside the pump ensures the product is primed and maintained at the optimum effective pressure.

## Comfortable – a silent, unobtrusive system provides major positive benefits to the patient’s quality of life.

Research by Price et al (2003) demonstrated that Repose aids patient comfort. *“In this pilot study statistically significant improvements in sleep and pain were noted over a four-week period” <sup>(4)</sup>*

An effective aid in the prevention and treatment of pressure ulcers <sup>(1,2)</sup>

**Indications for use, limitations and precautions**

**Indications for use**  
Repose products provide effective pressure redistribution for all persons at risk of developing pressure ulcers, including those assessed as very high risk. Repose is also appropriate for users with pressure related tissue damage - clinical supervision is advised where the damage is severe.

**Limitations for use**  
Repose is not suitable for the following:

- Persons weighing in excess of 139kg
- Persons with unstable spinal fractures
- Where body shape is such that the person cannot be fully supported by the Repose mattress overlay or cushion
- The Repose mattress overlay is suitable for use on top of a bed or trolley mattress. Use side rails in accordance with manufacturer's instructions and appropriate risk assessment
- The Repose cushion is intended for use on a static chair fitted with arm rests

**Cleaning Instructions**

**Precautions**

- If deterioration in skin condition is noted, clinical advice should be sought and, if so advised, use of the product discontinued
- Avoid direct contact with heat and sharp objects
- When deflated, keep away from babies and small children
- Keep away from pets
- \* All Repose products are latex free

**REPOSE CAN BE CLEANED AND REUSED**  
REPOSE CAN BE CLEANED WITH SOAP OR DETERGENT AND WATER AND CAN BE DISINFECTED IN ACCORDANCE WITH THE INFECTION CONTROL POLICY FOR STANDARD MATTRESSES  
ALLOW TO DRY BEFORE USE OR STORAGE
